Summary

Motivated and detail-oriented Computer Science Engineering student with hands-on experience in Java. Proven ability to build functional web and console-based applications including e-commerce portals, banking systems, and online shopping platforms. Strong foundation in OOPs, MVC architecture, and full-stack development. Adept at problem-solving, project management, and delivering user-friendly solutions, with a passion for innovation, design, and continuous learning.

Technologies

Languages: Java

Frontend: JavaScript, HTML, CSS, React Js

Tools: Eclipse, VS Code, MS Office, Git

Technologies: JDBC, Servlet (Tomcat), JSP

Frameworks: Spring, Spring Boot, Microservice

Database: Oracle, SQL, PL /SQL

Platform: Windows, Linux

Education

Kalam Institute of Technology, Berhampur, B.Tech in Computer Science and Engineering

- GPA: 8.0/10.0 2021-2025

Sri Sai Science Higher Secondary School, Higher Secondary, Science (CHSE)

- Percentage: 63 2019-2021

Ganjam Nodal Girls High School, Matriculation (BSE)

- Percentage: 60 2018-2019

Projects

Weather Forecasting System

- Designed and implemented a real-time weather monitoring system using Raspberry Pi 5 and sensors (VEML7700, BME280, MQ135, etc.).
- Used MERN stack for cloud-based data visualization (MongoDB, Express.js, React.js, Node.js) and hosted on AWS EC2
- Enabled accurate real-time weather data display at <https://kitweatherforecast.ionode.cloud/>.

Online Electronic Portal

- Developed a dynamic web-based shopping portal featuring separate modules for administrators and customers, ensuring clear role-based access and functionality.
- Implemented core features such as user authentication, product management, and purchase workflows using Java, JSP, Servlets, JDBC, and MySQL, enabling secure and efficient CRUD operations for product data.
- Designed the application following the MVC architecture, which improved code organization, scalability, and maintainability while supporting smooth interaction between the front-end and back-end.
- The portal provided a complete e-commerce experience, including login, product catalog browsing, cart management, and order processing, demonstrating strong skills in full-stack Java development and database integration.

Console Based Bank Management System

- Built a simple console-based banking system using Java. The project allows users to create accounts, deposit and withdraw money, and Create and Break fixed deposits. Implemented the system using basic OOP concepts like classes, inheritance, and method overriding.
- Create Saving or Current account
- Deposit & withdraw money
- Fixed Deposit creation
- Multiple classes with OOP concepts

Console Based E-Commerce Application

- Developed a fully functional console-based online shopping application simulating Amazon's core features such as user registration/login, product browsing, category-wise shopping (Books, Electronics, Dresses, etc.), cart management, dynamic discount & delivery logic, and final billing with multiple payment modes.
- Designed complete user authentication system.
- Built multi-category product catalog.
- Implemented shopping cart functionality with real-time bill calculation and quantity selection.
- Applied OOP principles

Certifications/Training

- Completed **Full Stack Java from Naresh IT**

Interests

- Design & Development
- Research & Innovation
- Learning New Technologies

Declaration

The information stated above is true the best of my knowledge and belief
